additional N-linked glycosylation sites are introduced at locations which impair complement fixing and Fc receptor binding ability. They are preferably located in the CH2 region of the Ty molecula. Antibodies bearing multiple sially-lax determinants are useful for disrupting undesirable interactions between cells or proteins. Disrupting this interaction has therapeutic applications, for

Disclosure: Fig 2: 35pp; English.
The sequences given in P31023 24 represent the beavy and light chains of Antibody D respectively Antibody D is a monocloual antibody which was derived from pertipheral blood lymphocytes from a hepatitis A virus (BAV) sero positive patient. Antibody D is closely related in nature to murine antibody B5B3. Total RNA was isolated from antibody D expressing cells and polyadenylated RNA was extracted. These polya RNA's were used to prepare a cDNA library which was screened for human kappa light (L) chains and two positive clones were detected.
Further heavy (H) chain closes were also isolated.
Sequence 476 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              86 sqnfqurvtitadkststahmeltsIrsedtavyycatdryrqanfdrarv qwfdpwqq 138

A B-cell superantigen (SAg) is a fragment of SpA D domain that specifically binds the Fab portion of variable region restricted antibodies. The SAg is used to enhance production of VH, especially variable from 10 VH, especially VH, restricted Ass Touring attempts to identify SAgs, as sequences (ES484-80) of H chains from 19 reactive with mod-SpA, and as and DNA sequences (ES484-25), vol442-55) of VH regions of SpA binders obtained from combinatorial libraries were determined. IgM protein KAS is derived from the germline configuration of a VH quen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 qkfqqrrtitadestntaymelrslrsddtamyycakeqyqdy-qr-p-fd-f--wqqqf ll4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This polypeptide sequence comprises the heavy chain variable region (YH), HBAL1, obtained by mutagenests of the VH CDR3 of human carcinoembryonic antigen (hCBA)-specific antibody CEAS (see W19881). A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 -8 M, is non-cross-reactive with human liver cells, and preferentially binds to the A3-B3 extracellular domain of hCEA and/or to cell-associated hCEA over columble hCEA. Preferred (A) include parings of WH and CU. Sequences from CEA1-7 (see W19876-85), or their CDR sequences.

The sequences from CEA1-7 (see W19876-95) obtained by mutagenests or chain shuffling. (A) is used to detect cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 aqkfqgrltitadeststaymelsslrsedtavyyca-q-anscnrsyyy-ymdvrgqgt 117

This polypeptide sequence comprises the heavy chain variable region (VH), HBB1, obtained by mutagenesis of the VH CDR3 of human carcinoembryonic antigen (hCBA)-specific antibody CEA6 (see W1981). A claimed specific binding member (A) comprises an hCBA specific antibody antigen binding domain that has a dissociation constant for hCBA of less than 1 x 10 - 8 M, is non-cross-reactive with human liver cells, and preferentially binds to the A3-B3 cextracellular domain of hCBA and/or to cell-associated hCBA over hCBA over soluble hCBA. Preferred (A) include pairings of VH and VL sequences from CEA1-7 (see W19876-85), or their CDR sequences, as well as CEA6 VH and VL variants (see W19886-95) obtained by mutagenesis or chain shuffling. An example of a claimed pairing is HBB11 VH with CEA6 VL. (A) is used to detect cells expressing hCBA, in vivo or in vitro, especially tumour cells for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 aqkfqgrltitadeststaymelsslrsedtavyycar-h-nh-nyelyyyymdvwgqgt 117

            This polypeptide seguence comprises the heavy chain variable region (VH), ToSD10, obtained by mutagenesis of the VH CDR3 of human carcinoembryonic antigen (htch3-specific antibody CEA6 (see https://www.ybsul.ac.antigen binding member (A) comprises an horax specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 -8 M, is non-cross-reactive with human liver cells, and preferred in the call of the A3-B3 extracellular domain of hCEA and/or to cell-associated hCEA over hCEA over soluble hCEA Preferred (A) include pairings of VH and VL sequences from CEA1-7 (see W19876-85), or their CDR sequences, as well as CEA6 VH and VL variants (see W19886-95) chrained by mutagenesis or chain shuffling. Examples of claimed pairings are TOSD10 VH with TOSD12 or CEA6 VL. (A) is used to detect cells.
                                                                                                                                                                                                                                                                expressing hCEA, in vivo or in vitro, especially tumour cells for diagnosing canner, e.g. adenorarcinoma of the colon, lung or breast Sequence. 123 AA;

This polypeptide sequence comprises the heavy chain variable region (WH) of human carcinoembryonic antigen (hCEA)-specific antibody CEA6. W (77215-32) and VL (772133-35) gene sequences were obtained for anti-hCEA antibodies CEA1-CEA7 (see W19876-85).

A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 - 8 M, is non-cross-reactive with human diver cells, and preferentially binds to the A3-B3 extracellular domain of hCEA and/or to cell-associated hCEA over hCEA cver
                                                                                                                                                                                                                                                                                                          3, Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Specific binding members for human carcinoembryonic antigen - bind to the A3-B3 extracellular domain of hCEA and are substantially non-cross-reactive with human liver cells, used for diagnosing
                constant for NCEA of less than 1 x 10 -8 M. In more constant to the A3-B3 with human liver cells, and preferentially binds to the A3-B3 vertacellular domain of http and/or to cell associated http Aver http Aver block over soluble http. Preferred (A) include pairings of VH and VL sequences from CEA1-7 (see W19876-85), or their CDR sequences as well as CEA6 VH and VL variants (see W19886-95) obtained by mutagenesis or chain shuffling. An example of a claimed pairing is HBB6 VH with CEA6 VL. (A) is used to detect cells expressing http. An example of a claimed pairing is HBB6 VH with CEA6 VL. (A) is used to detect cells for diagnosing
      specific antibody antigen binding domain that has a dissociation

Claim 8. Fig 48; 39pp. English.

A human anti-Varicella zoster virus monoclonal antibody was prepd.

S human anti-Varicella zoster virus monoclonal antibody was prepd.

S proposed to the professor of complement.

This cell line, designated cell line TC93KA9, produced an antibody designated 93KA9 entibody were cloned using PCR. At least two genes of the 93KA9 antibody were cloned using PCR. At least two meavy chain (gamma-1) and two light chain (kappa) specific clones were sequenced (see Q82749 & Q82750 respectively).
                                                                                                                                                                                                                                                                                            61 aqkfqgrltitadeststaymelsslrsedtavyycagr-shnyel-yyy-ymdvwgqgt 117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating glomerulonephritis with antibody against complement C5 component - to inhibit complement induced cell lysis Example 11: page 119-122; 181pp: English.

A humanised CDR-grafted and framework sequence-altered Fd, 5G1.1 VH + IGHRL (R77610), includes CDRs derived from mouse anti-C5 monoclonal antibody 5G1.1. It can be co-expressed with a humanised light chain (R77612) in human 293 BDNA cells using encoding DNAs subcloned into vector APBX.3P (T08476). Such humanised recombinant antibodies retain the ability of MAb 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with glomerulonephritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 AQKFQGRVTITADESTATGYMELSSLRSEDTAVYYCAMPYPKHCSRGSCWGWFDPWGQGT 120

From a cancer patient.

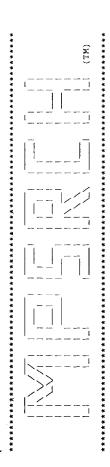

PS A process for isolating and synthesising human monoclonal anti-tumour cancers for isolating and synthesising human monoclonal anti-tumour antibodies has been produced. The process involves: (a) constructing at antibodies has been produced. The process involves: (a) constructing at antibodies has been phage library from the peripheral blood lymphocytes.

(PBLS) of a cancer patient; (b) screening for anti-tumour antibodies in the phage is the patient; (c) screening for anti-tumour antibodies in the phage is the patient; (c) assay with cultured tumour cells of the absorption against normal human cells; (d) cloning the phage by coupacting the phage with at least two types of cultured normal cells; and (f) further testing the specificity of cloned phage by coupacting the phage with at least two types of cultured normal cells; coupacting the phage with a least two types of cultured normal cells; coupacting the phage for more than one other tumour that is not the patient's tumour. The present sequence represents a human heavy a method as described and very antibody fusion phage library, produced by a method as described and therapeutic applications and for isolating tumour constitutions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antigens for studying tumourigenesis or for use as anti-cancer vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The human antibodies have low immunogenicity in humans compared to murine monoclonal antibodies (MADS). Since the antibodies are isolated from fusion phage libraries, their affinity and specificity for a tumour cell line can be improved by genetic manipulations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               67 rvtitadkststaymelsslrsedtavyyca---r--g-ggrydafdiwqqqtlvtvss 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              7 gglevkkpgssvkvsckasggtfssyaiswvrqapggglewmggiipifgtanyaqkfgg 66

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A human placental genomic DNA library cloned into the phage vector manner for XI I was screened with the human VH1 family specific oligonucleotide Q44186 clone lambda 49 8 was isolated and a 6.1kb xbal fragment containing the variable segment VH49.8 was subcloned into pnv03 to generate plasmid pu49.8. An 800bp region of this insert was sequenced (Q44185) and VH49.8 found to have an open reading frame and intact splicing and recombination sequence Q44185 was deduced from the coding sequence; the last 3 codons before the termination codon have not been translated.
                                           by molecular cloning of immunoglobulin genes by PCR Disclosure; Page 69; 94pp; English.

Land H-chain DNA was amplified by PCR from Graves' orbital tissue and clones encoding autoimmune-associated immunoglobulin fragments were obtained. 13/15 clones of H chain (1gG1) genes showed homology to the closest germline genes, DPID (QR9377) and hv1263 (Q89389). The DNA (Q89329) and corresp. amino acid (R72070) sequences of the VW region of a representative clone, OP7H1.2, are provided.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Name of the control of the control of the coloques non-rearranged and/or rearranged in chains non-rearranged and/or rearranged in chains non-rearranged and/or rearranged in chains a care in the human placental genomic DNA library cloned into the phage. The human placental genomic DNA library cloned into the phage specific oligonucleotide (see 02418). Phage clone lambda 49.8 was isolated and a 6.1 kb xbai fragment contq. the variable segment VH49.8 subcloned into pNNN3 to generate plasmid pVH49.8 and 80.0 bp region of this insert was sequenced. VH49.8 was found to have an open reading frame which encoded the sequence shown.
                                                                                                                                  ω
                                                                                             17-AUG-1992 (first entry)
Protein encoded by the human heavy chain V region gene VH49.
Heavy chain; variable region; VH1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 % Match 62.7%; Score 595; DB 4; Length 117; Local Similarity 82 5%; prod No 2 496-39; nes 80; Conservative 12; Mismatches 5; Indels
